

To maintain the level of production

The strong heats on summer produce stress at the animals, they reduce the consumption and low the production

Fan VTV820

Fan without maintenance.

Technical characteristics:
Nominal diameter: 820 mm
Diameter ext maximum: 1100 mm

Capacity exit free: 18,000 m³/h
Single or tree face motor
Power: 0,75Kw

Framework of polyester reinforced
Supports of frame in stainless steel
Propeller of polypropylene

Arm to fasten to columns

The fan is mounted in the columns of the fences or in the zone of rest or the waiting room

Assembly of pieces that permits multiple forms, so much in columns as in the ceiling
Articulate, permits to direct the air
Supports and pipe galvanized

Electric box

Electric box with timing, thermostat and protections, permits to act on fans and the bump. It is manufactured according

Sprinklers and nebulizers

Sprinklers on the fences are mounted, they wet to the animals to annul the camera of air that is created between the hair and the skin, this permits that the body can lose heat

Nebulizers of low pressure

They manufactured in material plastic
Easy to mount in pipe of polyethylene
With valve
Easy to dismantle and to clean
Volume to 3 at:
Green leader 5 l/hour
Leader 10 l/hour roar

Pad cooling

They air for positive pressure, cold air in the waiting room is entered
